

The Smallest Errors Can Spell Flooring Disaster...(There's a Silver Lining)

The results are in...

Having the ability to field calibrate your moisture meter, *demonstrates to clients and colleagues a clear focus on the importance of maintaining accuracy.* This is unique within the moisture measurement industry. *Wagner Meters* leads the way by providing you with this leading-edge technology...an industry first!

The ***Orion® Series of Moisture Meters*** is setting the new standard with...

***Advanced Technology, Superior Accuracy,
and Unmatched Versatility...***

Only the ***Orion® Series of Moisture Meters*** provide you with this type of assured confidence, so that you can consistently maintain a high level of precise accuracy. Being able to re-calibrate the minute that you have any concern about precise accuracy...is a time saver and a confidence builder.

Accurate moisture testing of wood products prior to installation...is paramount to the prevention of costly mistakes!

Let's look at this through a wide-angle lens...

You are a developer with a large custom home under construction in the Las Vegas area. The project is moving forward...efficiently and on schedule. The plank flooring was recently installed and a glaring problem was discovered. The lines of the plank flooring are not square...

In fact, they are over 2 inches out of square!

After some diligent research, the problem emerges...one of the main walls of the house was built *out of square*. The problem began in the corner with it only being 1/8 inch *out of square* over a distance of 36 inches. The distance from the origin of the problem to where the flooring was installed, greatly magnified the problem.

This was a costly error that could have been prevented! Just that 1/8 inch *out of square*...that small amount, created a disastrous challenge for your project.

When it relates to moisture measurement, the smallest inaccuracy can have catastrophic results.

What happens if your moisture meter was out of calibration and the entire plank flooring expanded into a warped and tented disaster...requiring the entire flooring to be removed? An extremely costly mistake, not to mention the potential damage to your professional reputation!

These damages could have been prevented if you were in possession of an **Orion® Wood Moisture Meter...the *Most Accurate, Most Advanced*** moisture meter on the market.* They give you the ability to field calibrate your moisture meter. In fact, the **Orion® Series of Wood Moisture Meters** are the **ONLY** wood moisture meters, on the market...who have the capability to be field calibrated! You do **NOT** have to send the moisture meter back to the factory, to be re-calibrated...**EVER!**

That is a huge time saver!

To make it even better, the **Orion® Series of Wood Moisture Meters** is not affected by surface moisture or wood temperature. Their versatility is unmatched...they are the **Most Versatile** wood moisture meter, on the market.

There is only one solution for professionals who deal in any type of wood product that can be affected by moisture...the **Orion® Series of Wood Moisture Meters**.

They are the **Most Advanced!** They are the **Most Accurate!*** They are the **Most Versatile!**

The **Orion® Series of Moisture Meters**...setting a new standard for consistently accurate measurements, by Xxxxxx Xxxxxx.
